

WT300 SERIES

DIGITAL POWER METER

THE 5TH GENERATION OF THE WORLD'S BEST SELLING POWER METER

High Performance and Reliability

- Basic Accuracy of 0.1% of Reading
- Low Current Measurement down to 50 micro-Amps
- DC, 0.5 Hz to 100 kHz Frequency Range
- Standard USB, and GPIB or RS232 Interfaces

Yokogawa's new compact WT300 series for reliable power measurement

The WT300 series is the 5th generation of Yokogawa's compact power meter portfolio. The world's best selling power meter is the power meter of choice in multiple industries from production lines to R&D applications.

YOKOGAWA ♦ WT310HC MICRA FORCE MITTER

WITH STATE OF THE STATE OF THE

WT310(1ch)

WT310HC(1ch, MAX40A)

WT332(2ch)/WT333(3ch)

Wide current input range with high performance and reliability

Wide current input ranges

Fast display and data update rate

0.1% of reading + 0.1% of range (50Hz/60Hz)

The WT300 series offers customers a wide range of current inputs from a few mA right up to 40Arms.

The fast display and 100ms maximum data update rate of the WT300 series

offers customers a short tact time in their testing procedures.

Consistent Basic Measurement Accuracy for all input ranges.

Simultaneous measurement of all parameters

A WT300 series can measure all DC and AC parameters. It can also measure harmonics and perform integration simultaneously without changing the measurement mode. The WTViewerFreePlus software is used to monitor and save all these parameters.

example of WTViewerFreePlus display

Convenient measurement functions

- MAX hold function

The maximum values of RMS/PEAK voltage & current active power, reactive power and apparent power can be held.

- Line filter and frequency filter capability

These filter functions will cut off unnecessary noise & harmonic components for fundamental waveform measurements.

PC, Data Logger and External Sensors connectivity

The WT300 series offers a wide range of communication interfaces such as USB, GP-IB or RS-232 (Selectable) and Ethernet (Optional).

Customers therefore have the flexibility to choose according to their application needs e.g. from production lines to engineering test benches. Customers can use WTViewerFreePlus software to set up all kinds of measurements. Additionally, the numeric values, waveform display* and trend graphs of the measurement data can be displayed and saved.

* Waveform display requires the /G5 Harmonic option

D/A output for measurement recording

The D/A option is used to output Voltage, Current, Power and other measured data for recording to data loggers (+/-5Vdc outputs).

(WT310/WT310HC 4CH, WT332/WT333 12CH)

Current sensor input

Customers have the option to select either 2.5V to 10V range (/EX1 option) or 50mV to 2V range (/EX2 option) inputs for measuring large currents using current clamps or current sensors with voltage outputs.

First in Class* and First in Industry*

First in class: Auto ranging function available in selected ranges

The auto-range function is used to select/change the range automatically in specific ranges. This results in shorter range changing times and thus quicker and more efficient testing.

First in industry : Integration measurement auto ranging function

Conventionally, when power meters operate in an integration mode to measure power consumption and standby power, the measuring ranges need to be fixed. However, if the level of the input exceeds the maximum of the selected range, the results will be incorrect and the test will need to be repeated with higher ranges applied.

The WT300 series has a high speed automatic ranging capability in integration mode which removes this need to repeat the test and integration is continuous and accurate.

This function is not only available for +/- Wh but also for Ah and DC current.

^{*} According to YOKOGAWA survey by Dec, 2012

WT300 power meters are easy to use, cost effective and accurate for a wide range of applications in Production, Testing, Evaluation and R&D.

For Home appliances and Office equipment

Production line or QA testing of electric Devices

- Compact half rack mount size helps customers build smaller test systems with a better Return on Investment (ROI).
- D/A output function for data recording
- Multiple communication interfaces, USB, RS-232 or GP-IB and Ethernet capability.

The simultaneous measurement of power consumption parameters such as U. I. P. frequency. Power Factor and Harmonics for production line or QA testing results in reduced tact times. Thus testing is faster and cheaper. The DA output and communication interfaces enable data to be remotely and

Development and evaluation tool for home appliances

- 5mA range helps small current measurement (WT310)
- Auto ranging function under Integration mode
- Range skip (range configuration) function provides the ability to select the usable ranges in advance. Auto ranging enables the WT300 series to rapidly adapt to changing input conditions.

The range skip function reduces the range change transition period. The WT310 can measure both large and small currents accurately in a single test. This can reduce the total evaluation period or removes the need to use two rather than one power meters for the application, thereby saving capital cost,

Testing to international standards, such as IEC62301. **Energy Star and SPECpower**

- The WT310 has a high measurement resolution of Max. 100µW under the 5mA range setting.
- Simultaneous measurement of normal power parameters. harmonic components and THD.
- Dynamic input capability of crest factor Max 300 (Peak value / minimum effective RMS value)
- Free PCM software for IEC62301 testing

The WT310 together with the power consumption measurement (PCM) software enables users to perform standby power testing according to international standard

Evaluation of large current equipment such as Induction Heaters/Cookers

- Direct high current measurement up to 40Arms without using external current sensors (WT310HC).
- Auto ranging function for Integration mode

The WT310HC allows 40Arms to be directly inputted without the requirement to use current clamps or current sensors. This not only provides more precise measurement but also saves on investment costs. The wide current ranges are from 1A to 40A and voltage ranges are from 15 V to 600 V. Customers can use it for the evaluation of special waveform driven devices such as IH cookers and heaters.

Please visit the URL below which shows many applications and examples. It will be regularly updated with the latest applications.

For Industrial equipment and Transportation

Automotive - Battery or DC driven device evaluation

- Accurate DC measurement: 0.3% total (WT310HC: 0.5% total)
- Direct high current measurement up to 40A without any external current sensor (WT310HC).
- Charge/Discharge (+/-Wh, +/-Ah) energy measurement for batteries

The WT310HC can measure currents up to 40A directly. This provides a cost effective and accurate method for testing DC driven devices in vehicles without having to use extra sensors.

Duration testing and efficiency measurement for industrial motors and rotating machinery

- Integration measurement for long period
- D/A output function for data recording
- DC, 0.5Hz to 100kHz broad bandwidth capability

The WT300 series provides reliable current integration (Ah) and Energy (Wh) measurement for up to 10,000 hours (approx. 1 year). The D/A option is used to save and monitor the measurement results (WT310/WT310HC: 4ch, WT332/WT333: 12ch). An external recorder or data logger like, a ScopeCorder, can be used to save this D/A function data along with other parameters such as temperatures, torque and rotation speed.

Evaluation testing of special waveform driven devices and distorted waveforms (including DC component)

- DC, 0.5Hz to 100kHz broad bandwidth capability
- Average active power measurement under integration mode

The WT300 series has a broad frequency capability of DC and from 0.5Hz to 100kHz. It can measure the RMS value of distorted waveforms like square waveforms or special waveform driven devices. The average active power measurement function gives accurate power consumption data for fluctuating power devices such as burst waveform operated devices. Therefore the customer can perform accurate distorted waveform measurements without using special mode settings.

Conformance and evaluation testing of uninterruptable power supplies (UPS)

- Maximum order setting for THD calculations
- Efficiency measurements using a single power meter
- Average active power measurement under integration Mode

The WT300 series enables users to conduct conformity tests according to UPS performance testing standards. The WT300 series is used to measure and calculate input & output levels, the efficiency, frequency and THD. The average active power data also provides accurate values of power consumption. The WT300 series along with the WTViewerFreePlus software helps to simultaneously measure all the necessary parameters required to test a UPS thereby reducing the evaluation time.

http://tmi.yokogawa.com/technical-library/application-notes/

WTViewerFreePlus For WT300 Series (included)

The WTViewerFreePlus software can capture measured numeric values, harmonic values and waveform data. The data can be transferred to a PC via a USB, GP-IB/RS-232 or Ethernet communication interface, and it can be displayed* and saved on the

* Waveform display requires /G5 Harmonic option.

Setting Window

As well as using the WT300 series front panel to setup the powermeter, you can use the software to quickly set up your favorite conditions. It also shows all the setting parameters and the status at a glance. In particular, you can set up the range-skip function (range -configuration setting) and specify the maximum order used for the THD calculation.

Measurement Window

The software can display items which cannot be shown on the display of the WT300 series, such as multiple numeric measurement parameters, the harmonics data of each order, bar graphs, trend graphs and voltage & current waveforms. The free software thus adds additional performance to the WT300 series.

* Please check the Instruction manual in the CD for more information

Support tools for creating dedicated programs!

Standby power measurement conforming to IEC62301 Ed2.0

Power Consumption Measurement Software (Free)

The Power Consumption Measurement Software together with a WT310 (or another WT series instrument) provides a trustworthy power measurement solutions for testing the standby and off mode power of household products and office equipment.

The solution enables testing to be performed according to the IEC62301 Ed1.0 and Ed2.0 standards which specify the use of special algorithms for determining the power stability in the device under test. The software thus gathers all the required measurement data from the WT310, which includes not only voltage/ current/ power/ frequency but also the total harmonic distortion (THD) and the crest factor (CF) of the AC power supply. We therefore also recommend that the WT310 is installed with the harmonic option (/G5) and that a low distortion power supply is used for the test.

Configuring and Establishing a New Connection between the WT310

Select OFF or ON (cutoff frequency of 500 Hz). Frequency filter Simultaneous conversion of voltage and current inputs Resolution: 16 bits.

conversion rate: Approx. 10us.

Frequency Measurement

11

Influence of temperature changes after zero-level compensation or range change
 Add the product of the voltage influence and the current influence listed below to the DC power accuracies.
 DC voltage accuracy: 0.02% of range/°C

DC current accuracies
WT310 (5mA/10mA/20mA/50mA/100mA/200mA ranges): 5uA/°C
WT310 (0.5A/1A/2A/5A/10A/20A ranges) and WT330 direct current input: 500uA/°C
WT310HC direct current input: 1mA/°C

WT310HC direct current input: TmA/°C
External current sensor input (/EX1): 1mU/°C
External current sensor input (/EX2): 50uV/°C
Influence of self-generated heat caused by voltage input
Add 0.000001 ×U/°s of reading to the AC power accuracies.
Add 0.000001 ×U/°s of reading + 0.000001 ×U/°s of range to the DC power accuracies. U is the voltage reading

(V). Influence of self-generated heat caused by voltage input lasts until falling the temperature of the input resistor even

if voltage input decreases.

Influence of self-generated heat caused by current input

V1310: Add $0.00013 \times l^2\%$ of reading to the AC power accuracies. Add $0.00013 \times l^2\%$ of reading + $0.004 \times l^2$ mA 0.54/14/24/54/104/20A range) or $0.00013 \times l^2\%$ of reading + $0.00004 \times l^2$ mA (5mA/10mA/20mA/50mA/100mA/200mA range), to the DC power accuracies. I is the current reading (A). WT310HC

Add 0.00006 × I²% of reading to the AC power accuracies.
Add 0.00006 × I²% of reading + 0.001 × I² mA to the DC power accuracies. I is the current reading (A).
WT330:

V1330: Add $0.0013 \times l^2\%$ of reading to the AC power accuracies. Add $0.00013 \times l^2\%$ of reading + $0.002 \times l^2$ mA to the DC power accuracies. I is the current reading (A). Influence of self-generated heat caused by current input lasts until falling the temperature of the shunt resistor even if current input decreases.

if current input decreases.

Accuracy changes caused by data update interval
When the data update interval is 100 ms, add 0.05% of reading to 0.5Hz to 1kHz accuracy.

Guaranteed accuracy ranges for frequency, voltage, and current
All accuracy figures for 0.5 to 10 Hz are reference values
The power accuracy figures for DC, 10 Hz to 45 Hz, and 400 Hz to 100 kHz when the current exceeds 20 A are

In power accuracy nature $x \in S$.

When power factor $(\lambda) = 0(S)$ apparent power)

• $\pm 0.2\%$ of S for 45 Hz $\leq 1 \leq 66$ Hz.

• $\pm (0.2 + 0.2 \times 1)\%$ of S for y to y 100 kHz as reference data. If is frequency of input signal in kHz.

When $0 < \lambda < 1$ (0; phase angle of the voltage and current) (nower reading) $\times 100$ (power reading)

when to < X < T(t): phase ariging or the voltage and current)
(power reading) × ([power reading error %) +
(power range error %) × (power range/indicated apparent power value) +
(tan0 × influence when X = 0)%)]

45 to 66 Hz: Add 0.3% of reading.
Less than 45 Hz: Add 1% of reading.
Same as the temperature coefficient for voltage and current.
Accuracy obtained by doubling the measurement range error for the accuracy when When the line filter is turned ON
Temperature coefficient
Accuracy when the

crest factor is set to 6
Accuracy of
apparent power S
Accuracy of the crest factor is set to 3.

Voltage accuracy + current accuracy

ee-wire (1P3W); three-phase,three-wire (3P3W); three r-wire (3P4W); or three-voltage, three-current (3V3A). t manual or auto ranging. Range select

The range is upped when any of the following conditions is met. Urms or Irms exceeds 130% of the currently set measurement range.
Crest factor 3: Upk, Ipk value of the input signal exceeds 300% of the currently set

measurement range.
• Crest factor 6: Upk, lpk value of the input signal exceeds 600% of the currently set

measurement range.

On the WT330, when any of those input elements meets the above condition, the range is increased the next time the measured value is updated.

Range decrease

• The range is decreased when all of the following conditions are met.

Urms or Irms is less than or equal to 30% of the measurement range.
 Urms or Irms is less than or equal to 125% of the next lower measurement ran
 Crest factor 3: Upk, lpk value of the input signal exceeds 300% of the currently

measurement range.
 Crest factor 6: Upk, lpk value of the input signal exceeds 600% of the currently set

measurement range. On the WT330, when all of the input elements meet the above condition, the range

On the WT330, when all of the input elements meet the above condition, the range is downed down the next time the measured value is updated.

Display mode
Select RMS (the true RMS value of voltage and current),
WOLTAGE MEAN (the rectified mean value calibrated to the RMS value of the voltage and the true RMS value of the current), DC (simple average of voltage and current).

Measurement
Select voltage, current, or the entire period of the data update interval for the signal used to achieve synchronization during measurement.
Select OFF or ON (cutoff frequency at 500 Hz).

Peak measurement
Measures the peak (max,min) value of voltage, current or power from the Display mode Switching instantaneous voltage, instantaneous current or instantaneous power that is sampled.

Removes the internal offset of the WT310/WT310HC/WT332/WT333

Specifications
Voltage and current frequencies applied to one selected input element can be measured. Measured item

voltage and current inequencies applied to the selected WT332 (two element model)

Select voltage (U1)/ current (I1) of input element1 or voltage (U3)/ current (I3) of input element3.

WT333 (three element model)
Select voltage (U1)/ current (I1) of input element1, voltage (U2)/ current (I2)

Method Reciprocal method Reciprocal method
Frequency measuring range Varies depending on the data update interval (see description given later) as follows.

Data Update Interval Measurement Range

Other Communication (See of input element2 or voltage (U3)/ current (I3) of input element3.

Measurement Range 25Hz \leq f \leq 100kHz 10Hz \leq f \leq 100kHz $5Hz \le f \le 100kHz$ $2.5Hz \le f \le 100kHz$ 1.5Hz $\leq f \leq 50$ kHz 5s 0.5Hz ≤ f ≤ 20kHz
Only for the direct current input of WT310HC, the maximum measurement range is

20kHz.
Auto switching among six types: 1 Hz, 10 Hz, 100 Hz, 1 kHz, 10 kHz,

and 100 kHz.
Select OFF or ON (cutoff frequency of 500 Hz). Frequency filter Accuracy

When the input signal level is 30% or more of the measurement range If the which the injury signal rever is 30% of miler on the ineastrement range if the crest factor is set to 3. (60% or more if the crest factor is set to 6)

• Frequency filter is 0N when measuring voltage or current of 200 Hz or less. Accuracy: ± (0.06% of reading)

Item Specifications

On the WT310/WT310HC/WT332/WT332, S, Q, \(\lambda\), and \(\textit{Ø}\) are derived through the computation of the measured values of voltage, current, and active power. Therefore, for distorted signal input, the value obtained on the WT310/WT310HC/WT332/WT333 may differ from that obtained on other instruments that use a different method.

If the voltage or current is less than 0.5% (less than or equal to 1% if the creat factor is set to 6) of the rated range, zero is displayed for S or Q, and error is displayed for \(\textit{A}\) much an equal to 1% if the creat factor is set to 6) of the rated range, zero is displayed for S or Q, and error is displayed for \(\textit{A}\) much an equal to 1% is a negative value; when the current leads the voltage, the Q value is displayed as a negative value; when the current lags the voltage, the Q value is displayed as a positive value. The value of QΣ may be negative, because it is calculated from the Q of each element with the signs included.

The lead and lag of the voltage and current inputs can be detected correctly for the following:

• Sine waves

• When the measured value is 50% or more (100% or more when the crest factor is 6) D/LEAD\/G/LAG\\ (Phase angle Ø' s D (lead) and G (lag))

of the measurement range
• Frequency: 20 Hz to 2kHz(WT310HC: to 1kHz)

 Phase difference: ±(5° to 175°)
 Set the current sensor transformation ratio, VT ratio, CT ratio, and power factor when applying the external current sensor, VT, or CT output to the instrument.
 Significant digits: Selected automatically according to significant digits in the voltage and current ranges.

• Selectable range: 0.001 to 9999

Select the method from the following two types.

Averaging

Scaling

Specifications
Select manual integration mode, standard integration mode, or repetitive integration Automatically stop integration by setting a timer.
Selectable range: 0 hours 00 minutes 00 seconds to 10000 hours 00 minutes 00 seconds (Set automatically to manual integration mode for 0 hours 00 minutes 00 seconds)
WP: 999999MWh/-99999MWh, q: 999999MAh/-99999MAh
Holds the elapsed integration time and integration value and stops integration when the elapsed time of integration reaches the maximum integration time of 10000 hours or when the integrated value reaches the maximum or minimum displayable integration when the properties of the Count overflow integration value (999999M or -99999M). ±(Power accuracy (or current accuracy) + 0.1% of reading) (fixed range) Accuracy ±(Yower accuracy) or current accuracy) + 0.1% of reading) (fixed range)
** In the case of auto range:
The measurement is not carried out during a range change.
The first measurement data after the range change is added for the Period which measurement was not carried out.
Auto range or fixed range for Integration is available
For details on range switching, see section of Voltage, Current, and Active Power Range setting

Valid Frequency Ranges for Integration DC to 45 kHz Current
When the measurement mode is RMS:
DC, lower limit frequency determined by the data update interval to 45 kHz
When the measurement mode is VOLTAGE MEAN:
DC, lower limit frequency determined by the data update interval to 45 kHz
When the measurement mode is DC:

Timer accuracy ±0.02% Start, stop and reset operations are available using an external remote signal. (applies to products with the /DA4 or /DA12 option)

The items listed below apply to all of the tables.

• When the crest factor is set to 3.

• When λ (the power factor) is 1.

• Power figures that exceed 1.2kHz are reference values.

• For the direct current range, add 10uA to the current accuracy and (10uA/direct current range)×100% of range to the power accuracy.
• For the external current sensor range, add 100 µV to the current accuracy and (100uV/external current sensor range)

For the external current sensor range, and 100 JW to the current accuracy and (1000W range) to the power accuracy.
 For nth harmonics component input, add ((n/(m + 1))/50)% of (the nth harmonics reading) to the n + mth harmonics of the power.
 For nth harmonics of the voltage and current, and add ((n/(m + 1))/25)% of (the nth harmonics reading) to the n + mth harmonics and n - mth harmonics of the power.
 Add (n/500)% of reading to the nth component of the voltage and current, and add (n/250)% of reading to the nth

The accuracy when the crest factor is 6 is the same as the accuracy when the crest factor is 3 after doubling the

 The accuracy frame are close to a control of the measurement range.
 The guaranteed accuracy ranges for frequency, voltage, and current, are the same as the guaranteed ranges for ordinary measurement.

If the amplitude of the high frequency component is large, influence of approximately 1% may appear in certain

narmonics.

Because the influence depends on the size of the frequency component, if the frequency component is small with respect to the range rating, the influence is also negligible.

B9284LK ▲	External sensor cable	Current sensor input connector, Length 0.5 m	1
705926	Connection Cable	1 m, For DA4, DA12 option	1

A Due to the nature of this product, it is possible to touch its metal parts. Therefore, there is a risk of electric shock, so the product must be used with caution.

1 Use these products with tow-voltage circuits (42 V or less).

■ AC/DC Current sensor /Clamp on Probe

Model	Product Name	Description
CT1000	AC/DC Current sensor	DC~300 kHz, ±(0.05% of reading +30uA), 1000 Apk
CT200	AC/DC Current sensor	DC~500 kHz, ±(0.05% of reading +30uA), 200 Apk
CT60	AC/DC Current sensor	DC~800 kHz, ±(0.05% of reading +30uA), 60 Apk
751552	Clamp-on probe	30 Hz~5 kHz, 1400 Apeak(1000 Arms)
96030	Clamp-on probe	20 Hz~20 kHz, ±0.5% reading, 200 Arms
751574	AC/DC Current sensor	DC~100 kHz, 600 Apeak(400 Arms)

■ Model and Suffix Codes

Model	SuppixCode	Description
WT310		1 Input element model
Power Cord	-D	UL, CSA standard, PSE
	-F	VDE standard
	-R	AS standard
	-Q	BS standard
	-Ĥ	GB standard
	-N	NBR standard (for Brazil)
Communication Interface	-C1	GP- IB
*USB is standard	-C2 select one	BS- 232
Optional function	/C7	Ethernet interface
optional failution	/EV1	External sensor input 2.5V/5V/10V
	/EX2 select one	External sensor input 50mV/100mV/200mV/500mV/1V/2V
	/G5	Harmonics Measurement
	/DA4	D/A- output(4CH)
Model	Suppix-Code	Describe
WT310HC	- Cuppin Sout	1 Input element /High current model
Power Cord	-D	UL, CSA standard, PSE
1 OWE COIL	-F	VDE standard
	-R	AS standard
	-Q	BS standard
	-H	GB standard
	-N	NBR standard (for Brazil)
Communication Interface	-C1	GP- IB
*USB is standard	-C2 select one	RS- 232
Optional function	/C7	Ethernet interface
Optional function	/EY1	External sensor input 2.5V/5V/10V
	/EX2 select one	External sensor input 50mV/100mV/200mV/500mV/1V/2V
	/G5	Harmonics Measurement
	/DA4	D/A- output(4CH)
Model	Suppix-Code	Describe
WT332	Опрых обис	2 Input elements model
WT333		3 Input elements model
Power Cord	-D	UL, CSA standard, PSE
1 OWE COIL	-F	VDE standard
	-R	AS standard
	-Q	BS standard
	-H	GB standard
	-N	NBR standard (for Brazil)
Communication Interface	-C1	GP- IB
	-C2 select one	RS- 232
*USB is standard Ontional function	/C7	Ethernet interface
Optional function	/C7 /EX1	Ethernet interface External sensor input 2 5V/5V/10V
	/EX1 appart and	External sensor input 2.5V/5V/10V
	/EV1	

Standard accessories
Power cord(1set), Rubber foot(1set), Current input protective cover(each 1 set), Start up guide(1set), Connector (provided only with
//DA4 or //DA12, each 1 set), Safety terminal adapter 758931 (provided two adapters in a set times input element number), CD
(1piece,included the startup guide, user guide, instruction manual and the communication manual by PDF data, and Viewer Software)

758917 Test lead set Two leads in a set. Use 758917 in combination with 758922 or 758929. Total length: 75 cm Rating: 1000 V, 32 A

758922 Small alligator adapters For connection to measurement leads (758917). Two in a set. Rating: 300 V

758929 Large alligator adapters For connection to measurement leads (758917). Two in a set. Rating: 1000 V

758923 *1 Safety terminal adapter set (spring-hold type) Two adapters in a set.

B9284LK ** 709526 External Sensor Cable 26-pin cable for options DA4 and For connection the external input DA12 of the WT500 to current sensor. Length: 50 cm.

Due to the nature of this product, it is possible to touch its metal parts. Therefore, there is a risk of electric shock, so the product must be

used with caution.

11 Maximum diameters of cables that can be connected to the adapters 758923 core diameter: 2.5 mm or less; sheath diameter: 4.8 mm or less 758931 core diameter: 1.8 mm or less; sheath diameter: 3.9 mm or less

12 The coax cable is simply cut on the current sensor side. Preparation by the user is required.

Before operating the product, read the user's manual thoroughly for proper and safe operation.
